QUANTITIES-TO-BUDGET WORKSHEET

Turn a quantity takeoff into a line-item budget. Quantities come from the takeoff (net as drawn). The waste factor and the unit costs are yours: your crew, your supplier, your market.

REF	TRADE	ITEM	SHEET	QTY (NET)	UNIT	YOUR WASTE %	YOUR UNIT COST	LINE TOTAL
							Subtotal	

Line total = Qty × (1 + waste %) × unit cost. Keep the Ref and Sheet columns: when a number is questioned, you can find it on the drawing in seconds.

Template only. StructConsultPro supplies quantities, never prices or cost advice. StructConsultPro provides quantity takeoff services only. Sealed drawings, engineering judgments, and any work that requires a licensed Professional Engineer are outside our current scope and must be performed by a separately engaged licensed professional.
